Different Types of ETL Tools

- Commerical ETL Tools
 - Paid Tools offered by established companies like AB Initio, Informatica, Talend, Oracle, IBM
 - **Used by large organisations**
 - Why do companies choose commercial tools if they are already available for free?
 - High Support
 - High Scalability
 - eg, python/pandas as ETL? for small projects yes . for big projects? no
 - High Reliability
 - **Less time consuming**
 - High Security
 - Examples:
 - **Informatica**
 - PowerCenter, Informatica Cloud IISC (Informatica Intelligent Cloud Services)
 - **IBM** DataStage
 - **Microsoft** SQL Server Integration Services
 - **Oracle** Data Integrator
 - Talend
 - SaS Data Integration
- Open-source ETL Tools
 - Free
 - Apache Nifi, Talend Open Studio, and Pentaho
 - **Used by small, medium-sized companies**
 - **For companies that want to save money and tweak the source code, etc.**
- Cloud-based ETL Tools
 - Run on cloud infrastructure and are offered as service
 - AWS Glue, Google Cloud Dataflow, and Microsoft Data factory
 - Used by orgs who just want to buy cloud and use its inbuilt services
 - Why do companies not use cloud based etl tools?
 - Classic example of generic(AWS glue) vs specialist (Informatica)
 - Advantage of being tailored to each usecase
- Custom ETL Tools
 - To meet unique data requirements of certain companies

Each Tool has its own advantage and disadvantages. Choosing a one depends on number of factors like size of company, complexity of its data integration requirement, IT Strategy etc “
